

TSP02™ Oven Bags & Oven Film

Catering Packs

TSP02™ oven bags and film are the ideal healthy, clean and modern way to cook food in the oven. The food self-bastes as the juices circulate in the bag, so there is no need to add any fat. A natural and healthy way to cook. Meat or fish for example retain more moisture when cooked in an oven bag. Additional benefits in portion control are achieved when the cooked meat is sold or served by weight. Terinex oven bags can be safely used in the oven to 200°C and the oven bags stay clear throughout the cooking process. Finally, and certainly a key benefit, Terinex oven bags help keep ovens clean - an important consideration in today's modern, time-conscious kitchen.

For the microwave, **TSP02™** oven bags or film are ideal as they present no barrier to the microwaves and can be used for microwave cooking in direct contact with the food.

In the freezer, **TSP02™** oven bags and film stay clean and flexible down to -30°C. **TSP02™** will not stick to meat or other packages and enables dishes to be transferred from oven to freezer and from freezer to microwave.

Terinex Oven Bags
